

Erase and Restore at Scale

Large Scale Deployment of Apple Silicon Macs, iPads, and iPhones

∴ ACRONAME

DFU Blaster Pro plus the **Acroname Kit for Automating Apple Device Restore** erases and restores Apple Silicon Macs and USB-C iPads and iPhones at scale, with no manual intervention. Use Apple tooling to wipe and redeploy devices, update to the latest OS, or push custom images — all from one host.

Features

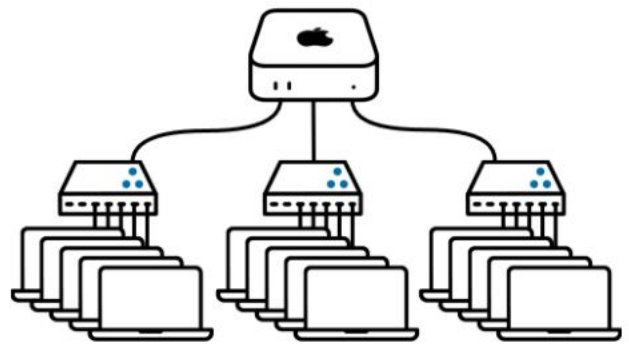

- Erase and restore up to **15 Macs** in less than **15 minutes** from a single Mac mini host (three kits, five Macs each).
- Supports all Apple Silicon Macs and USB-C iPads and iPhones.
- Locking USB-C cables stay secured to the hub.
- No Mac power adapters needed. Each hub powers target Macs over their USB-C data connection; the optional 280 W supply charges all five Macs at 45 W per port.
- Securely erase and restore macOS, iOS, and iPadOS.
- Install software and initial configuration with MDS.

Benefits

- **Work in batches.** Restore fleets instead of machine-by-machine.
- **Scalable.** Add kits to grow from 5 to 15 targets per host; add hosts and locations beyond that.
- **Manage from one app.** Erase and restore from a single interface.

Real World Applications

- **Enterprise IT:** Securely redeploy Apple devices company-wide.
- **Education:** Quickly restore computer labs, classroom or student devices.
- **Small Business:** Rapid, hassle-free resets for any size of deployment.
- **Refurbishment:** Automatically erase and restore regardless of current state.

Reliable, Consistent, Scalable

- A single integrated solution.
- Validated across a wide range of Apple Silicon devices.
- Expands by adding hubs, stations, or locations.

Solution Components

Software: DFU Blaster Pro, MDS, and everything needed to erase and restore at scale.

Hardware: Acroname Kit for Automating Apple Device Restore. Cables and 100 W power supply included.

Support: Premium support for real-world deployments.

Training: Documentation, online, and video training for your staff.
