∴ACRONAME

Features

— USB-C male to USB-C male
— Coaxial construction on super speed wires
— Acroname logo marking on A side of cable connector
— Supports USB 4.0 / 40Gbps link speeds
— Supports USB PD modes up to 48V / 5A
— USB-C Orientation Agnostic
— 0.7 Meters in length
— No E-mark or SOP functionality on CC1 or CC2 pins

Overview

USB-C Universal Orientation Cable (UOC) is a custom coaxial construction USB-C male to USB-C male cable for use with Acroname's programmable USB-C-Switch and USBHub3c The UOC provides an orientation-agnostic USB-C connection, required for cable flip automation with the USB-C-Switch. By acting as a transparent USB-C port extension, the UOC enables validation and manufacturing testing of USB-C devices including both USB-C cable orientations without needing to manually rotating cable connections. The cable is marked with Acroname logos on each cable end that correlates to the cable's A side to aid in visual identification in application setups.

Typical applications include:

— Manufacturing testing of USB Type-C ports
— USB device validation and development
— Cable orientation "flip" testing (requires USB-C-Switch)

Absolute Maximum Ratings

Stresses beyond those listed under ABSOLUTE MAXIMUM RATINGS can cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under RECOMMENDED OPERATING CONDITIONS is not implied. Exposure to absolute-maximum rated conditions for extended periods affects device reliability and may permanently damage the device.

Parameter	Minimum	Maximum	Units
Voltage on V_{BUS} pins A4, A9, B4, B9	-	60.0	V
Current on V_{BUS} pins A4, A9, B4, B9	-	5.0	A
Current on CC1, CC2 pins A5, B5	-	1.25	A
Current on SSTXp1, SSTXn1, SSRXp1, SSRXn1, SSTXp2, SSTXn2, SSRXp2, SSRXn2, Dp1, Dn1, Dp2, Dn2, SBU1, SBU2	-	0.25	A

Table 1: Absolute Maximum Ratings

Handling Ratings

Parameter	Conditions/Notes	Minimum	Typical	Maximum	Units
Ambient operating temperature, T_A	Non-Condensing	0.0	25.0	50.0	°C
Storage temperature, T_{STG}		-10.0	-	85.0	°C

Table 2: Handling Ratings

Recommended Operating Ratings

Values presented apply to the full operating temperature range.

Parameter	Conditions/Notes	Minimum	Typical	Maximum	Units
Voltage on V_{BUS} pin		0.0	-	48.0	V

Table 3: Recommended Operating Ratings

Typical Performance Characteristics

Values presented apply to the full operating temperature range.

Parameter	Conditions/Notes	Minimum	Typical	Maximum	Units
DC Resistance of VBUS	A4, B4, A9, B9	14.4	15.3	16.5	mΩ
SSTXp1, SSTXn1, SSRXp1, SSRXn1, SSTXp2, SSTXn2, SSRXp2, SSRXn2, Dp1, Dn1, Dp2, Dn2		331	334	338	mΩ
SBU1, SBU2, CC1, CC2		294	298	304	mΩ

Table 4: Typical Performance Characteristics

Typical Applications

The UOC should only be used in conjunction with the USB-C-Switch. It will not function without a standard USB-C cable somewhere in the system. In most applications involving only one USB-C-Switch, there will be only one UOC in any connection path. Generally, the UOC should be connected to the device under test (DUT), where the DUT is the device which needs to have both connector orientation tested or verified. The following block diagrams show two simple examples utilizing the UOC and the USB-C-Switch to test cable flip on the DUT port or ports.
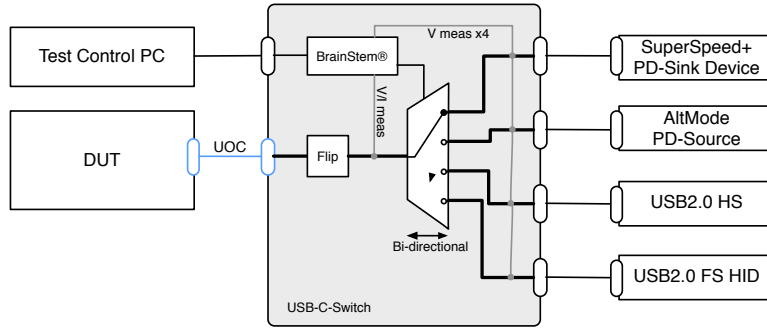

Figure 1: Application example using the UOC and USB-C-Switch to emulate cable flips on one DUT port and connecting multiple types of downstream devices.

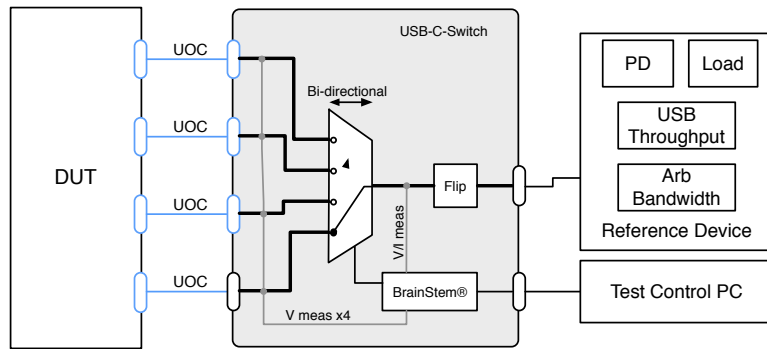

Figure 2: Application example using the UOC and USB-C-Switch to emulate cable flips on multiple DUT ports and connecting a reference downstream device.
